

### Project Background

In 2021, the Town of Hanover (Town) completed a municipal service needs assessment for the Town's Special Policy Areas (SPAs) within the current municipal boundaries. The assessment confirmed the need to replace the 66-year-old 7<sup>th</sup> Avenue water tower. Growth and development are planned for the Town; as such, it is important to ensure that the new water tower has the ability to service growth within the Town's SPAs. A new water tower will provide increased access to potable water to the existing residents and ensure sufficient pressure and fire flow at all times. The Town has retained the services of Ainley Group to complete a Schedule 'B' Municipal Class Environmental Assessment (Class EA) to identify water tower replacement alternatives, including location, to ensure the new water tower has the ability to service the Town's new growth while improving the Town's security of water supply.

### How to Get Involved

Public consultation is a key component of the Class EA process. An on-line Public Information Centre (PIC) has been established to present and obtain public input on the alternative options, evaluation process and the preliminary preferred solution. As of November 30, 2023, the PIC presentation and associated material will be available at <https://www.hanover.ca/7th-avenue-water-tower-replacement-class-ea>. Print copy of the PIC material can be reviewed in-person at the Town's office during regular business hours. Comments relating to the PIC will be received until January 5, 2024 and incorporated into the final report.

All those interested in the project are urged to review the PIC presentation and associated materials. Comments received through the course of the study will be considered when selecting the preferred solution. Please contact one of the individuals listed below if you have any questions, comments or would like to be added to the Project Contact List.
